

ABSTRACT

A system for printing photos, or images generally, includes a server computer that stores data representing a plurality of images in a photo database. A server web interface enables communication over the Internet, and the server computer includes an image print application that enables images to be printed using a client computer connected to the server web interface over said Internet. The server computer also includes an image enhancement module that enhances an image for printing. In response to a print request (over the Internet) from the client computer, the server computer sends image data and the image enhancement module to the client computer. The server computer activates the image print application to create print commands for a printer driver, and to create enhanced image data in the client computer with the image enhancement module prior to printing. The enhanced image data is removed from the client computer immediately following printing.
